Microorganism WebQuest: What's the Difference Between ...

Viruses are not living organisms, bacteria are. Viruses only grow and reproduce inside of the host cells they infect. When found outside of these living cells, viruses are dormant. Their "life" therefore requires the hijacking of the biochemical activities of a living cell. Bacteria, on the other hand, are living organisms that consist of single cell that can generate energy, make its own food, move, and reproduce (typically by binary fission). This allows bacteria to live in many places ...

Virus vs. Bacteria: What is the Difference? | Merriam-Webster

Answer the questions below. 11) How are antibiotic resistant bacteria created? 12) How can you (and all of us) help prevent the emergence of antibiotic resistance? Go back to the main page. Bacteria Webquest - MrRobinsonWebStuff

The biggest difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces. Bacteria are intercellular organisms (i.e. they live in-between cells); whereas viruses are intracellular organisms (they infiltrate the host cell and live inside the cell).

Bacteria vs Virus - Difference and Comparison | Diffeen
