value of time  $t$ , the instantaneous velocity  $\mathbf{v} = \mathbf{v}(t)$  and acceleration  $\mathbf{a} = \mathbf{a}(t)$  have the general, coordinate-independent definitions;  $\mathbf{v} = \frac{d\mathbf{r}}{dt}$ ,  $\mathbf{a} = \frac{d\mathbf{v}}{dt}$ . Notice that velocity always points in the direction of motion, in other words for a curved path it is the tangent vector. Loosely speaking, first order derivatives are related to ...

gauge invariance . The emphasis on variational principles in an article devoted to gauge invariance has the following motivation. The property that classical equations can be derived from a variational principle has played an essential role in the quantization of the corresponding models.

The third theory, eternalism, is that there are no objective ontological differences among present, past, and future because the differences are merely subjective. Adolf Hitler's rise to power in Germany is not simply in the past; it is in the past for you, but in the future for Aristotle.
