Herstein's Topics is the clearest, most naturally motivated exposition of abstract algebra. At any point in the text, the reader can sense the careful development of the whole. The exercises

aren't a grad student's hodgepodge or filter that satisfies the publisher's urging to justify the latest edition.

Topics in Algebra, 2nd Edition: Herstein, I. N ...

Herstein's mathematical writing is some of the best, at times a pleasure to read. I recommend this book, especially for self

study or a supplement to an algebra course. This book is worth a skim even for its historical value as an example of who to construct a mathematical text.

Israel Nathan Herstein (March 28, 1923 – February 9, 1988) was a mathematician, appointed as professor at the University of Chicago in 1951. He worked on a variety of areas of algebra, including ring theory, with over 100 research papers and over a dozen books.

Israel Nathan Herstein - Wikipedia

n as inverse element of m n. 2. Prove that if Gis an abelian group, then for all a;b2Gand all integers n, (ab) n= anb . Solution: We resort to induction to prove that the result holds for positive integers. For n= 1, we have (a 1b)1 = ab= a b1. So the result is valid for the base case. Suppose result holds for n= k 1, i.e. (ab)k 1 = ak 1 bk 1.

I am currently studying Group Theory from I.N. Herstein's Topics in

Algebra.However after studying about 50 pages of it I felt it lacks a bit of geometrical flavour (one of my friends described via email some time back how dihedral groups were treated in his course).He also said that Herstein's treatment is not exactly very modern though it supposedly has some good exercises.
